

FIBRAPAN ULTRALIGHT[®]

DESCRIPTION

It is the fibre board (MDF) with the lowest density in our range. Manufactured from selected timber fibres pressed with synthetic resins at high temperatures. The final result is an ideal board for a great variety of uses and applications.

Classified E1.

CHARACTERÍSTICS

The board can be coated just as any standard MDF, with decorative materials such as PVC, painting, etc. Surface smooth and soft. Great uniformity and dimensional stability. Great lightness.

APPLICATIONS

Widely used in setting up and assembling exhibitions and trade fairs, as internal dividers, screens, false ceilings, etc.... This product is gradually finding its way into mobile home manufacturing and into the picture frame industry. For general use in dry environments.

ADVANTAGES

As FIBRAPAN UL has about 30% less weight than the standard MDF, it is used in those cases where very light weight panels are required. FIBRAPAN UL offers real advantages whenever it is crucial that the boards are easier to handle and whenever it is appreciated that it has lighter weight.

STANDARD FORMATS (mm)

	9	12	15	16	18	19
2440 x 1220	●	●	●		●	●
