

IBERPAN 300®

The MDF light solution

DESCRIPTION

Fibreboard (MDF) especially developed for applications that require a low-weight board.

Classification E1; low emission of formaldehyde.

CHARACTERISTICS

- Iberpan 300's main feature is reflected in its low density (approximately 300kg/m³).
- Iberpan 300 can be directly edged with the same machinery often used for any other MDF board.

APPLICATIONS

- Door or sandwich board filling.
- The glueing of melamine, veneer, HPL or CPL coated thin boards to Iberpan 300 is allowed.

ADVANTAGES

Iberpan 300 has been developed to provide solutions to problems such as excessive weight of thick pieces. It also helps to avoid the complications derived from processing boards wich combine different materials, as it is easy to edge and cut.).

Its availability in thicknesses ranging from 30 mm to 50 mm, covers a wide range of needs in the furniture industry and the door sector.
